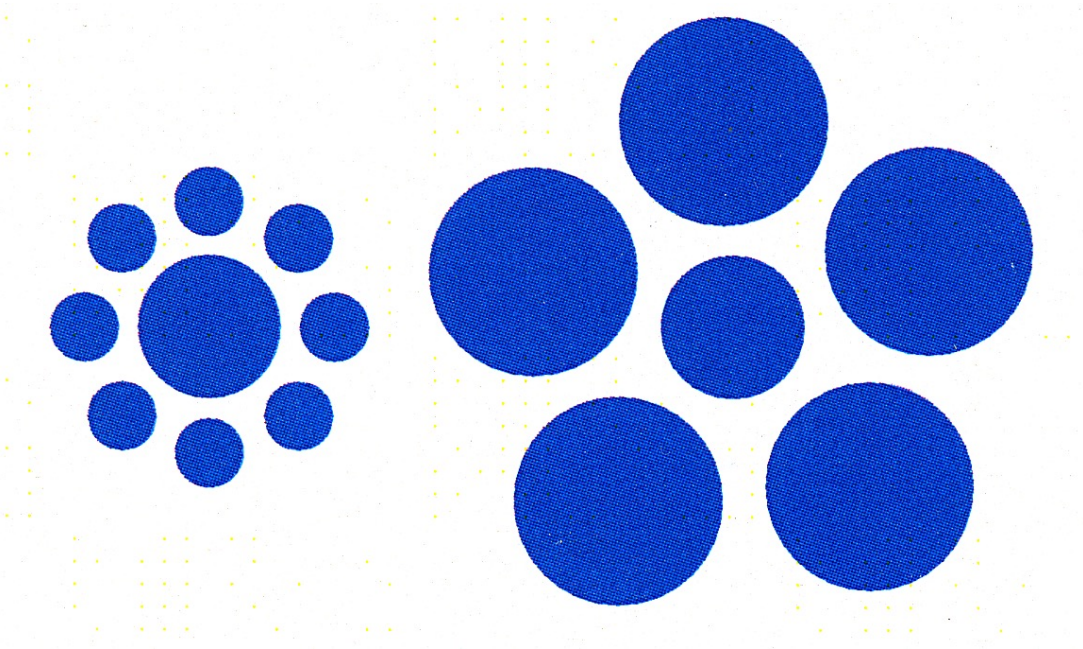
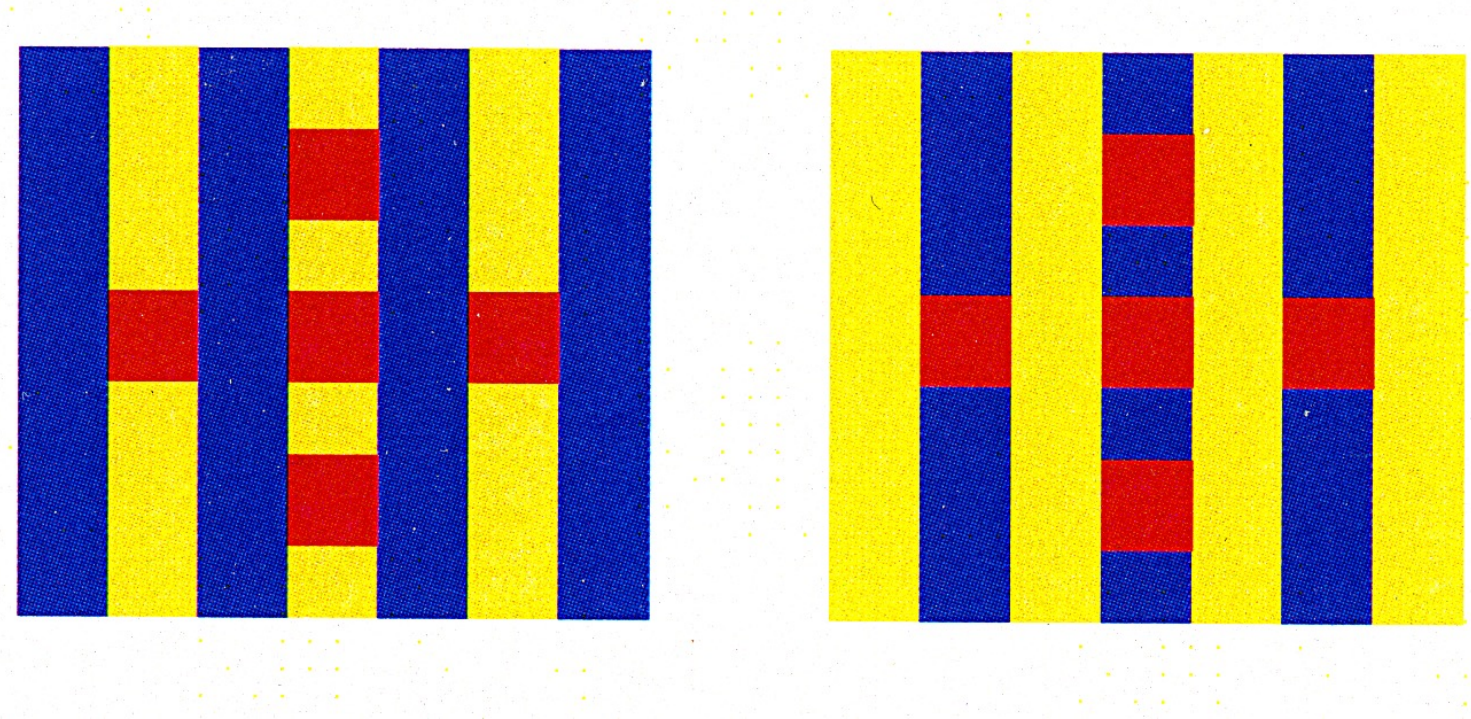
Sliding away or do they ?

Actually all the grey lines are parallel.

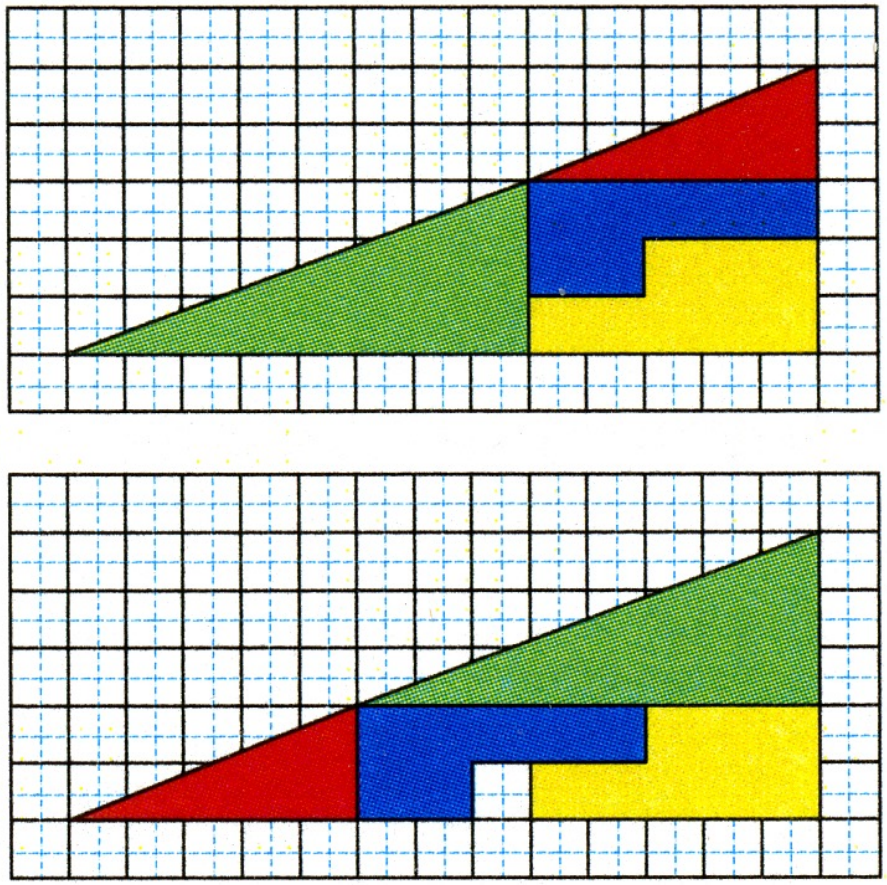


Are the centre circles the same size ?

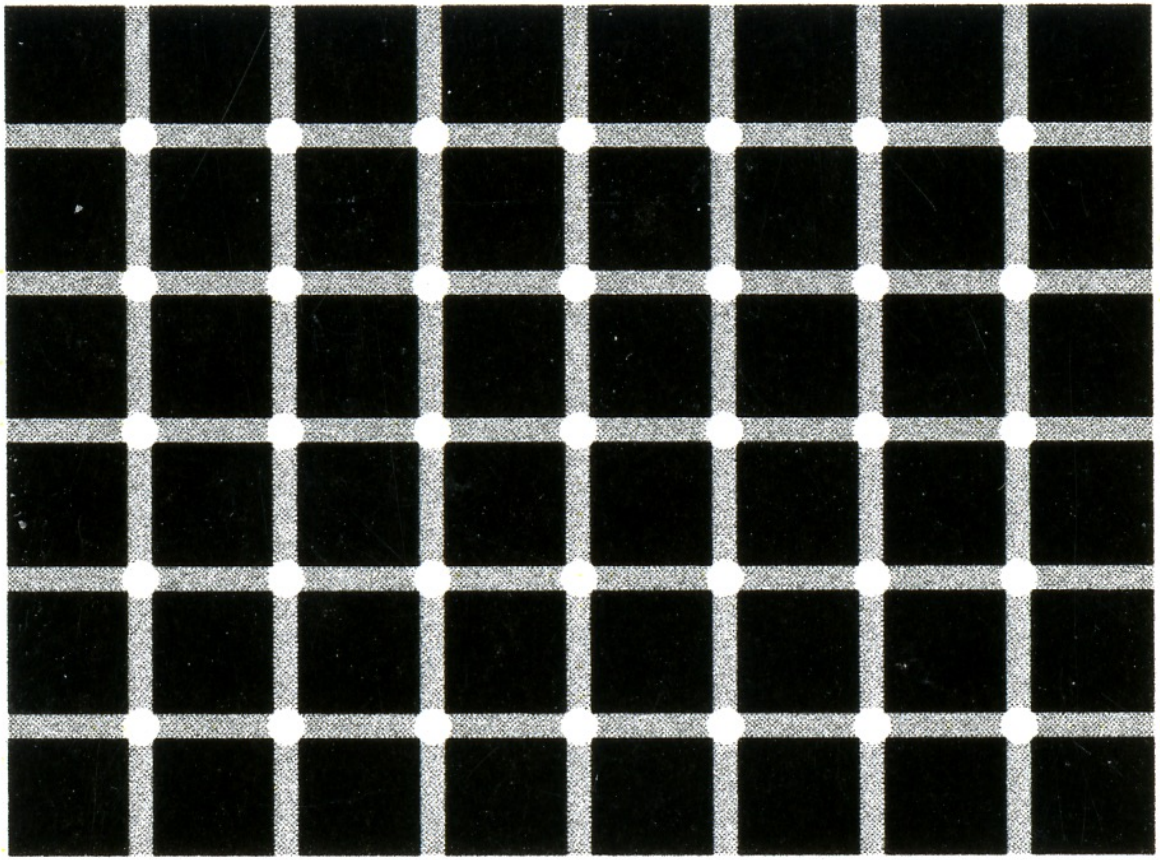
The appearance of objects is dependent on their context - the centre circles are the same size.



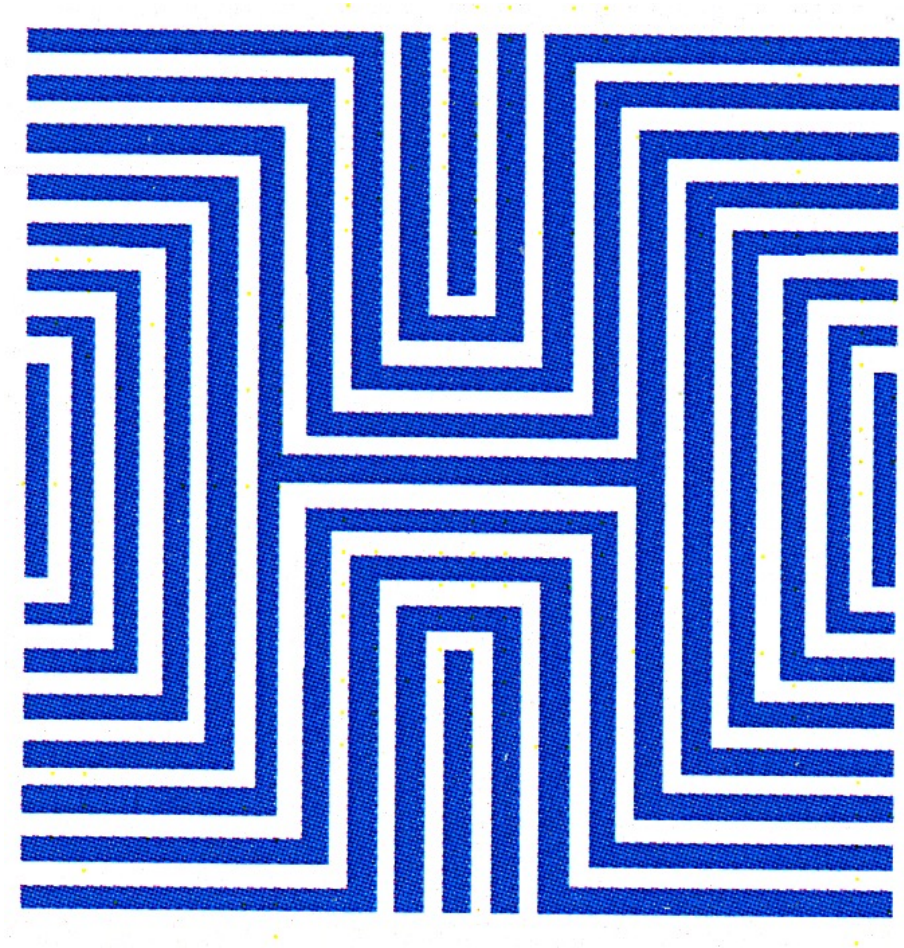
The red squares on the left appear darker than those on the right, although they are identical



The shapes have not changed from one picture to the other so where did that extra square come from ?

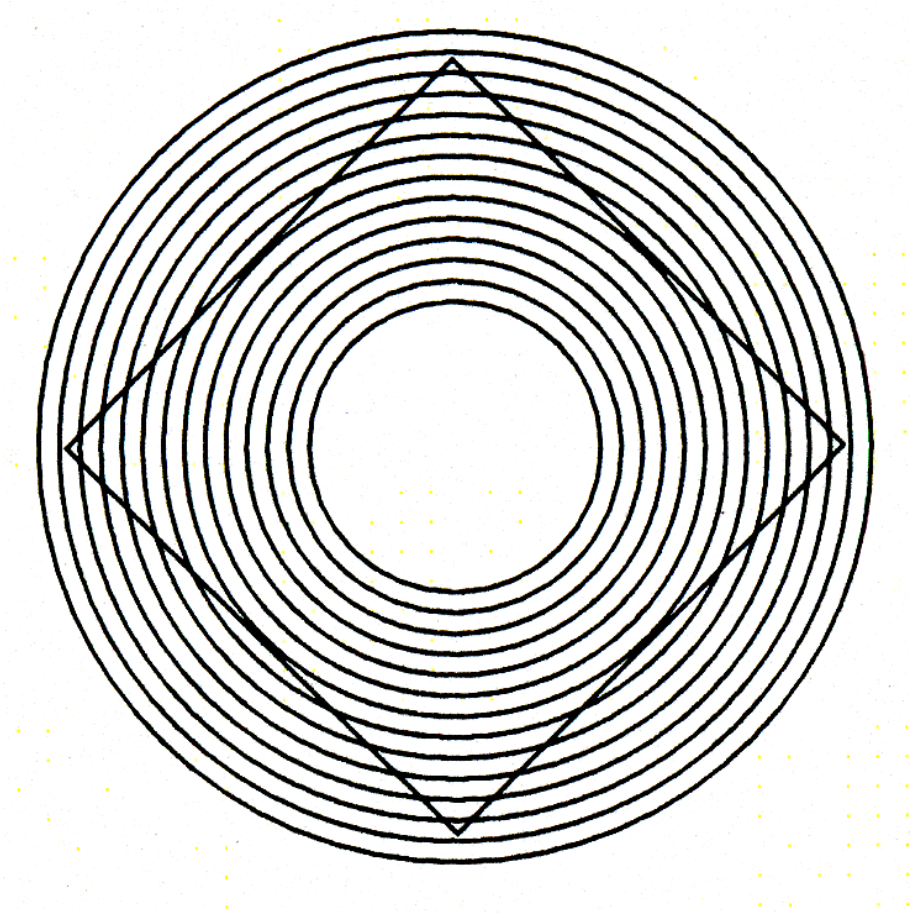


Black dots - where are they coming from ?

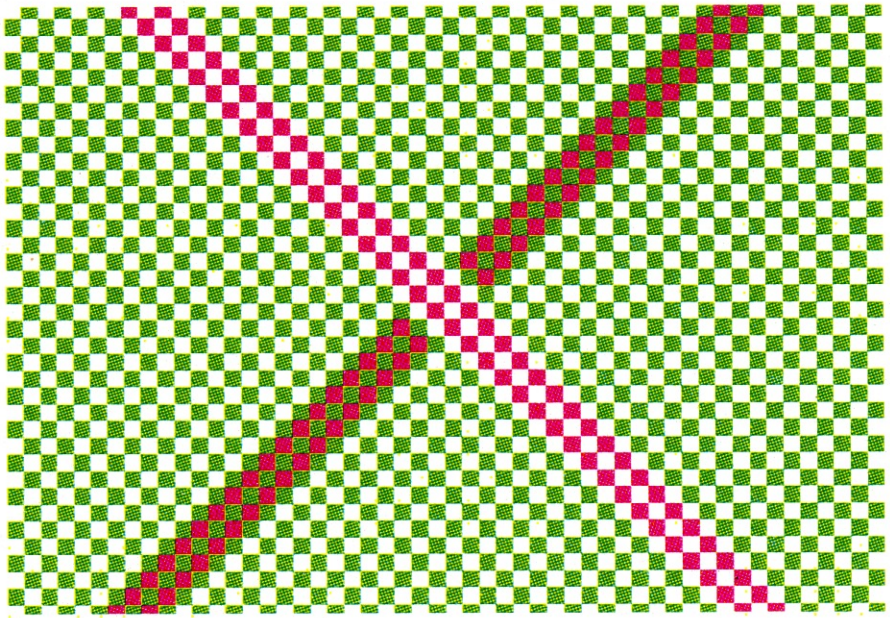


Squares or diamonds ?

Neither actually. Just our brains monkeying around with less recognisable shapes until it comes up with something familiar.



Do the outlines of the diamond appear to bow in the middle ?



There is only one tone of green and one of pink in the grid

Yellow Blue Orange
Black Red Green
Purple Yellow Red
Orange Green Black
Blue Red Purple
Green Blue Orange

Say the COLOUR of the word, not the word itself.

Why is it so difficult ? Because while the left side of the brain is trying to say the word the right half tries to say the colour
